

Seungjun Lee

Computer Science and Engineering Student | Seoul National University

Email: stevelee0817@snu.ac.kr | GitHub: github.com/stevelee0817 | Personal Website: stevelee0817.github.io

Interdisciplinary Profile

Computer Science and Engineering student with a broad interdisciplinary orientation across software, algorithms, AI, student policy, education, philosophy, film, and social issues. I am especially interested in how technical systems shape human judgment, learning environments, public institutions, and cultural experience. My strength is connecting computational thinking with communication, leadership, and human-centered problem framing.

Core Strengths

- Technical problem solving: Python-based algorithm training, data structures, BFS, dynamic programming, priority queues, binary search, implementation, Git/GitHub, and basic web development.
- AI and society perspective: Interest in AI ethics, philosophy of technology, responsible system design, and the social impact of digital tools.
- Leadership and coordination: Student council work, mentoring, event planning, academic/career program planning, and communication between students and university offices.
- Policy and writing: Experience drafting student policy proposals and organizing arguments around career support, academic systems, and institutional accessibility.
- Humanities and culture: Active interest in film criticism, philosophy, ethical dilemmas, and how visual culture shapes interpretation and public conversation.

Education

Seoul National University - B.S. in Computer Science and Engineering

Relevant interests: algorithms, software systems, AI, web development, digital ethics, human-computer interaction, and technology-related humanities.

Experience and Activities

Student Council President, Department of Computer Science and Engineering - Seoul National University

- Organized and supported student-facing academic, social, and community programs within the department.
- Worked on communication between students, faculty, and administrative offices to improve student experience.
- Developed practical leadership skills in planning, writing, negotiation, and coordination.

Education and Career Affairs, Student Executive Committee - Seoul National University

- Contributed to academic and career-related planning, including policy discussion and proposal writing.
- Focused on improving access to career information, mentoring, and university support systems.
- Practiced translating student needs into structured policy language and actionable proposals.

Freshman Program Mentor and Student Mentor

- Supported new students in adapting to academic life, university culture, and student communities.
- Helped design approachable explanations and guidance for students with different backgrounds.

Film, Humanities, and Cultural Activities

- Active in SNU film-related communities and interested in film criticism, aesthetics, and ethical interpretation.
- Connects technical interests with philosophy, cinema, media culture, and questions about human decision-making.

Selected Projects

Personal Website with GitHub Pages - Built and deployed a static personal website using HTML, CSS, Git, GitHub Pages, and Codex. Practiced an AI-assisted workflow: prompt, implement, review, revise, commit, and deploy.

Algorithm Problem Solving - Practiced algorithmic problem solving in Python, including BFS, dynamic programming, priority queues, binary search, and implementation-focused problems.

Student Policy and Career Support Writing - Worked on student-facing policy writing related to career guidance, academic systems, information accessibility, and institutional support.

Appropriate Technology / Environmental Project Work - Participated in student project discussions around engineering, sustainability, and user-centered problem solving.

Skills

Programming	Python, Java, C/C++
Web / Tools	HTML, CSS, Git, GitHub Pages, VS Code, Codex, Notion
Problem Solving	Algorithms, data structures, debugging, structured decomposition, iterative improvement
Communication	Policy writing, presentation planning, mentoring, academic and career program coordination
Interests	AI, technology and society, philosophy, ethics, film criticism, human-centered systems

Courses and Learning Goals

Planned or continued areas of study: Data Structures, Algorithms, Computer Systems, Artificial Intelligence, Web Programming, Software Engineering, and courses connecting technology with humanities and society.

Brief Statement

I aim to develop as a computer science student who can build reliable software while also asking broader questions about why systems matter, whom they serve, and how they should be designed. My long-term goal is to combine technical depth with interpretive, ethical, and organizational ability.
